Medium-density foam body
(5-8 lb/ft\(^3\) - 80-128 kg/m\(^3\))

The Knapp Red Criss Cross Polly Pig is used for medium length runs in pipelines where extra abrasion resistance is required. The tough elastomer coating is still flexible enough to allow the pig to reduce to pass through minor cross-sectional reductions or restrictions. The Red Criss Cross Polly Pig is manufactured using Knapp’s exclusive K-Lite™ polyurethane foam (5-8 lb/ft\(^3\) density); this tough, hi-flexibility, open-celled foam is particularly suited for the rugged environment encountered in modern pipelines.

The Red Criss Cross is available with double-dished ends for more-efficient fluid removal.
